Education

Bandung Institute of Technology Aug 2021 – Aug 2025
Bachelor of Engineering – Informatics Engineering *Bandung, Indonesia*
GPA: 3.59 / 4.00 (Cum Laude)

Experience

Software Engineer Apr 2026 – Present
Kick Avenue *Jakarta, Indonesia (Remote)*
- Owned end-to-end delivery of customer reviews, ratings, and photo uploads across backend, web, and mobile, with 13.5% of tracked mobile review viewers without prior purchases making their first paid purchase within seven days.
- Built an end-to-end affiliate program across backend, web, and mobile, covering referral attribution, commission processing, and performance dashboards, pending release.
- Maintained and extended OpenSearch-powered search across backend, web, and mobile, handling an estimated 350,000 daily search requests with a 127 ms median API response time in production samples.
- Resolved legacy push notification bugs causing duplicate sends and missed deliveries while automating push reminders, with 25% of the browsing-reminder cohort observed returning to product browsing within 24 hours.
- Hardened Midtrans checkout with transactional locking to prevent overselling and lost inventory updates, safely routing 48 stock-conflict payments to refunds in the first month after release.
- Designed a proposed Laravel-to-Go migration strategy using the Strangler Fig pattern, defining phased rollout and rollback plans alongside modular monolith architecture and Go coding standards.

Software Engineer Apr 2025 – May 2026
MainStory *Jakarta, Indonesia (Remote)*
- Architected an automated Quality Control (QC) audit system using Redis Queue for asynchronous tasks and LLMs to review 500+ daily reports and photos, reducing manual workload and improving content oversight.
- Built an automated hiring pipeline using n8n: engineered scrapers for Glints/Jobstreet/KitaLulus, WhatsApp outreach via WATI, and implemented AI-driven scoring of Hireflix interviews to replace manual screening.
- Revamped the end-to-end CI/CD pipeline for both front-end and back-end services using Docker, automating deployments for staging and production environments to reduce manual errors and accelerate release cycles.
- Established an observability stack integrating Grafana and Loki for centralized logging, and configured automated Slack alerting for production and staging errors, leading to faster debugging and incident response.
- Engineered monetization features including nanny rating, tipping, and automated overtime calculation, integrating with the Xendit payment gateway to successfully increase average nanny earnings by 10-20% monthly.

Web3 Developer (Freelance) Jan 2025 – Jun 2025
Self-Employed *(Remote)*
- Launched 5 promotional websites for cryptocurrency projects, engineering complex and interactive user interfaces with Next.js and Tailwind CSS, and integrating 3D objects and animations using Spline to drive user engagement.
- Developed a supporting backend using Python and FastAPI to fetch and process on-chain data, leveraging Large Language Models (LLMs) via prompt engineering for advanced data synthesis and interpretation.
- Expanded project accessibility by developing a browser extension and a mobile application using React Native.

Frontend Developer Intern Nov 2024 – Apr 2025
AssistX Enterprise *Jakarta, Indonesia (Remote)*
- Engineered and implemented new data-driven pages and reusable interactive components for an internal monitoring platform using Next.js and Material UI, delivering a scalable and high-performance front-end solution.

Software Engineer Intern Jul 2024 – Sept 2024
Charoen Pokphand Indonesia *Jakarta, Indonesia*
- Pioneered the company's first biometric attendance solution, single-handedly designing and building the verification backend with Python and FastAPI to eliminate identity fraud for 5,000+ employees across 2,000+ stores.
- Enhanced the front-end React Native app by introducing a suite of accountability features, headlined by randomized check-ins and the seamless integration of the new biometric system.

Certification

Bangkit 2024 | *Cloud Computing* Sept 2024 – Jan 2025
- Gained hands-on experience with Google Cloud, applying cloud computing, DevOps, and site reliability engineering principles across application deployment, infrastructure automation, CI/CD, security, and observability.

Technical Skills

Languages: Python, TypeScript, Go, Java, C#, PHP
Frameworks & Libraries: React, Tailwind CSS, Next.js, Node.js, Jest, FastAPI, React Native, Flutter, Laravel
Databases: PostgreSQL, MySQL, MongoDB, Redis, Redis Queue
Cloud, DevOps, & CI/CD: Docker, AWS, GCP, GitHub Actions, OpenTelemetry, Grafana, Microservices
Tools & Methodologies: Git, Agile, Scrum, Jira, GitHub Copilot, Cursor
