EDUCATION

Bandung Institute of Technology

Bachelor of Engineering – Informatics Engineering

GPA: 3.59 / 4.00 (Cum Laude)

Aug 2021 – Aug 2025

Bandung, Indonesia

EXPERIENCE

Software Engineer

MainStory

Apr 2025 – Present

Jakarta, Indonesia (Remote)

- Architected an automated Quality Control (QC) audit system, leveraging Large Language Models (LLMs) to review 500+ daily nanny reports and photos, significantly reducing manual workload and improving content oversight.
- Revamped the end-to-end CI/CD pipeline for both front-end and back-end services using Docker, automating deployments for staging and production environments to reduce manual errors and accelerate release cycles.
- Established a comprehensive observability stack integrating Grafana and Loki for centralized logging, and configured automated Slack alerting for production and staging errors, leading to faster debugging and incident response.
- Engineered core monetization features including nanny rating, tipping, and automated overtime calculation, integrating with the Xendit payment gateway to successfully increase average nanny earnings by 10-20% monthly.
- Developed key operational automation systems, including performance-based payroll calculation and an intelligent auto-assignment mechanism for nannies, eliminating hours of manual administrative work.
- Integrated a headless CMS using Builder.io, empowering the content team to manage and publish articles and news independently, which accelerated content delivery by 30%.

Web3 Developer (Freelance)

Self-Employed

Jan 2025 – Jun 2025

(Remote)

- Launched 5 promotional websites for cryptocurrency projects, engineering complex and interactive user interfaces with Next.js and Tailwind CSS, and integrating 3D objects and animations using Spline to drive user engagement.
- Developed a supporting backend using Python and FastAPI to fetch and process on-chain data, leveraging Large Language Models (LLMs) via prompt engineering for advanced data synthesis and interpretation.
- Expanded project accessibility by developing a browser extension and a mobile application using React Native.

Frontend Developer Intern

AssistX Enterprise

Nov 2024 – Apr 2025

Jakarta, Indonesia (Remote)

- Engineered and implemented new data-driven pages and reusable interactive components for an internal monitoring platform using Next.js and Material UI, delivering a scalable and high-performance front-end solution.

Junior Software Engineer

AVS Simulator

Sept 2024 – Dec 2024

Bandung, Indonesia

- Transformed an autonomous car's perception system by expanding its YOLO model's detection from a single class to a comprehensive set of 5+ road objects, while resolving instabilities to ensure smooth and continuous tracking.
- Owned the end-to-end engineering of the control system, deploying the recognition model on an NVIDIA Jetson Nano to process video at 60 FPS and command the vehicle's actuators via serial communication.

Software Engineer Intern

Charoen Pokphand Indonesia

Jul 2024 – Sept 2024

Jakarta, Indonesia

- Pioneered the company's first biometric attendance solution, single-handedly designing and building the verification backend with Python and FastAPI to eliminate identity fraud for 5,000+ employees across 2,000+ stores.
- Enhanced the front-end React Native app by introducing a suite of accountability features, headlined by randomized check-ins and the seamless integration of the new biometric system.

CERTIFICATION

Bangkit 2024 | Cloud Computing

Sept 2024 – Jan 2025

- Gained hands-on experience deploying scalable applications on Google Cloud, utilizing GKE for container orchestration, Cloud Run for serverless computing, and Terraform for infrastructure automation (IaC).
- Applied DevOps and SRE principles by configuring CI/CD workflows, implementing security best practices, and establishing observability using Google Cloud's operations suite for monitoring, logging, and alerting.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, HTML/CSS, SQL

Frameworks: React, Node.js, Express, Spring Boot, Django

Developer Tools: Git, VS Code, IntelliJ, Eclipse

Databases: MySQL, PostgreSQL, MongoDB

Libraries: pandas, NumPy, Matplotlib
