Experience

Software Engineer Apr 2026 – Present

Kick Avenue *Jakarta, Indonesia (Remote)*

- Optimized OpenSearch size matching and facet fallbacks, reducing a multi-size query from 10.2 s to 1.1 s in production benchmarks; supported an estimated 350,000 search requests/day.
- Reduced Laravel seller-list response time from 17.3 s to 3.1 s in a cold-request benchmark against production data using batched queries and SQL aggregation.
- Hardened Laravel/MariaDB checkout with transactional locking to prevent overselling and lost inventory updates; routed 48 stock-conflict Midtrans payments to refunds in the first month after release.
- Added Kubernetes migration gates and enforced 80% test coverage of changed executable lines in CI/CD, blocking deployments on migration failures.
- Integrated DANA payments through Midtrans across Laravel and Flutter checkout and offers, handling wallet redirects, payment verification, and ambiguous-payment recovery.
- Delivered customer reviews, ratings, and photo uploads using Laravel, Next.js, and Flutter; observed a 13.5% seven-day first-purchase rate among tracked mobile review viewers with no prior purchases.
- Made Next.js top-ups recoverable after payment interruptions with one-time Midtrans initiation and invoice recovery to prevent duplicate payment requests.
- Rebuilt consignment exports with streamed XLSX generation, private download links, and RabbitMQ redelivery safeguards to avoid loading full reports into memory and repeating failed work.
- Recovered 81 GiB on shared CI runners by removing 380 abandoned Docker volumes; automated cleanup to prevent disk exhaustion.
- Built an affiliate program across backend, web, and mobile with referral attribution, performance dashboards, atomic commission processing, and failure recovery.
- Built browsing reminders and fixed duplicate and missed push notifications using atomic claims and failure recovery; 25% of users in the measured reminder cohort returned to product browsing within 24 hours.
- Proposed a phased Laravel-to-Go migration to a modular monolith using the Strangler Fig pattern, with shadow validation, canary releases, single-writer ownership, and rollback safeguards.

Software Engineer Apr 2025 – Apr 2026

MainStory *Jakarta, Indonesia (Remote)*

- Automated quality-control reviews of 500+ daily reports and photos using Redis Queue background jobs and large language models (LLMs), reducing manual review work.
- Built nanny ratings, tipping, and overtime calculation with Xendit payments; average monthly nanny earnings increased 10-20% after launch.
- Automated staging and production deployments for frontend and backend services using Docker-based CI/CD.
- Centralized logs with Grafana and Loki and configured Slack error alerts across staging and production.
- Automated candidate sourcing from Glints, Jobstreet, and KitaLulus, WhatsApp outreach via WATI, and AI scoring of Hireflix interviews using n8n.

Experience (continued)

Web3 Developer (Freelance) Jan 2025 – Jun 2025

Self-Employed *(Remote)*

- Built Python/FastAPI APIs for LLM-powered news credibility analysis and PDF tax-report downloads; updated Solana RPC integrations for on-chain transaction retrieval.
- Developed a Chrome extension and React Native app for AI-powered news credibility analysis with saved history.
- Launched five cryptocurrency promotional websites using Next.js, Tailwind CSS, and Spline for animated 3D content.

Frontend Developer Intern Nov 2024 – Apr 2025

AssistX Enterprise *Jakarta, Indonesia (Remote)*

- Built data-driven pages and reusable components for an internal monitoring platform using Next.js and Material UI.

Software Engineer Intern Jul 2024 – Sept 2024

Charoen Pokphand Indonesia *Jakarta, Indonesia*

- Built a Python/FastAPI biometric attendance backend to deter identity fraud (not deployed to production).
- Integrated biometric verification and randomized check-ins into the React Native attendance app.

Technical Skills

Languages: Python, TypeScript, Go, Java, C#, PHP
Frameworks & Libraries: React, Tailwind CSS, Next.js, Node.js, Jest, FastAPI, React Native, Flutter, Laravel
Databases: PostgreSQL, MySQL, MongoDB, Redis, Redis Queue
Cloud, DevOps, & CI/CD: Docker, AWS, GCP, GitHub Actions, OpenTelemetry, Grafana, Microservices
Tools & Methodologies: Git, Agile, Scrum, Jira, GitHub Copilot, Cursor

Education

Bandung Institute of Technology Aug 2021 – Aug 2025

Bachelor of Engineering – Informatics Engineering *Bandung, Indonesia*

GPA: 3.59 / 4.00 (Cum Laude)

Certification

Bangkit 2024 | *Cloud Computing* Sept 2024 – Jan 2025

- Applied Google Cloud, DevOps, and site reliability engineering practices to deployments, infrastructure automation, CI/CD, security, and observability.
