## EDUCATION

### Bandung Institute of Technology

*Bachelor of Engineering – Informatics Engineering*

GPA: 3.59 / 4.00 (Cum Laude)

Aug 2021 – Aug 2025

*Bandung, Indonesia*

## EXPERIENCE

### Software Engineer

*MainStory*

Apr 2025 – Present

*Jakarta, Indonesia (Remote)*

- Architected an automated Quality Control (QC) audit system, leveraging Large Language Models (LLMs) to review 500+ daily nanny reports and photos, significantly reducing manual workload and improving content oversight.
- Built an automated hiring pipeline using n8n: engineered scrapers for Glints/Jobstreet/KitaLulus, WhatsApp outreach via WATI, and implemented AI-driven scoring of Hireflix interviews to replace manual screening.
- Revamped the end-to-end CI/CD pipeline for both front-end and back-end services using Docker, automating deployments for staging and production environments to reduce manual errors and accelerate release cycles.
- Established an observability stack integrating Grafana and Loki for centralized logging, and configured automated Slack alerting for production and staging errors, leading to faster debugging and incident response.
- Secured internal staging environments by deploying a self-hosted OpenVPN server, migrating infrastructure from public-facing access to a private network to eliminate external security vulnerabilities.
- Engineered monetization features including nanny rating, tipping, and automated overtime calculation, integrating with the Xendit payment gateway to successfully increase average nanny earnings by 10-20% monthly.

### Web3 Developer (Freelance)

*Self-Employed*

Jan 2025 – Jun 2025

*(Remote)*

- Launched 5 promotional websites for cryptocurrency projects, engineering complex and interactive user interfaces with Next.js and Tailwind CSS, and integrating 3D objects and animations using Spline to drive user engagement.
- Developed a supporting backend using Python and FastAPI to fetch and process on-chain data, leveraging Large Language Models (LLMs) via prompt engineering for advanced data synthesis and interpretation.
- Expanded project accessibility by developing a browser extension and a mobile application using React Native.

### Frontend Developer Intern

*AssistX Enterprise*

Nov 2024 – Apr 2025

*Jakarta, Indonesia (Remote)*

- Engineered and implemented new data-driven pages and reusable interactive components for an internal monitoring platform using Next.js and Material UI, delivering a scalable and high-performance front-end solution.

### Software Engineer

*AVS Simulator*

Sept 2024 – Dec 2024

*Bandung, Indonesia*

- Transformed an autonomous car's perception system by expanding its YOLO model's detection from a single class to a comprehensive set of 5+ road objects, while resolving instabilities to ensure smooth and continuous tracking.
- Owned the end-to-end engineering of the control system, deploying the recognition model on an NVIDIA Jetson Nano to process video at 60 FPS and command the vehicle's actuators via serial communication.

### Software Engineer Intern

*Charoen Pokphand Indonesia*

Jul 2024 – Sept 2024

*Jakarta, Indonesia*

- Pioneered the company's first biometric attendance solution, single-handedly designing and building the verification backend with Python and FastAPI to eliminate identity fraud for 5,000+ employees across 2,000+ stores.
- Enhanced the front-end React Native app by introducing a suite of accountability features, headlined by randomized check-ins and the seamless integration of the new biometric system.

## CERTIFICATION

### Bangkit 2024 | Cloud Computing

Sept 2024 – Jan 2025

- Gained hands-on experience deploying scalable applications on Google Cloud, utilizing GKE for container orchestration, Cloud Run for serverless computing, and Terraform for infrastructure automation (IaC).
- Applied DevOps and SRE principles by configuring CI/CD workflows, implementing security best practices, and establishing observability using Google Cloud's operations suite for monitoring, logging, and alerting.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Go, Python, Java, Solidity, Kotlin, PHP

**Frameworks & Libraries:** React, Next.js, Node.js, Express, FastAPI, React Native, Flutter, Laravel

**Databases:** PostgreSQL, MySQL, MongoDB, Redis

**Cloud, DevOps, & CI/CD:** Docker, GCP, GitHub Actions, Open Telemetry, Grafana, Prometheus, Jest

**Tools & Methodologies:** Git, Agile, Scrum, Jira
